

CDA Type Dropdown Spec

Add a "CDA Type" dropdown with four options that determines how hidden fees roll up into the agent's commission breakdown. This came out of the June 11 [#cda-automation thread](#). Biju defined the four types and confirmed the control lives in two places; Krish confirmed it does not exist yet and he will add it. This spec covers the dropdown control only — the per-type agent breakdown behavior is still an open design item Shaily flagged for a call.

I. The Ask

1. What's needed

NOT BUILT

A single dropdown to select one of four CDA types. The selection governs which splits are visible to the agent and how hidden fees get absorbed into the Team Split or Radius Split.

- Biju: "we need to select one of 4 options."
- Biju: "this is a dropdown in team settings in soul and in auditor settings for each transaction."
- Krish: "I will add it in the CDA. Currently it's not there."

Biju [#cda-automation](#) · Thu Jun 11

this is a dropdown in team settings in soul and in auditor settings for each transaction

II. The Four Options

- | | |
|----------------------------|---|
| 1. Full Transparency CDA | Agent sees everything. All splits and visible fee line items are shown as they are today. |
| 2. Radius Split Hidden CDA | Agent cannot see what Radius makes. Per Biju, the whole amount (Radius fee + team fee) is added and shown under the Team Split. |
| 3. Team Split Hidden CDA | Agent cannot see what the team makes. Per Biju, the whole amount (Radius fee + team fee) is added under Radius. |
| 4. Gross CDA | Agent sees gross only. Named by Biju as the fourth option; exact display rules to be confirmed on the design call. |

III. Where It Lives

LOCATION	SCOPE	SET BY
Team settings (Soul)	Per team (default)	Team lead / ops
Auditor settings	Per transaction (override)	Auditor

- | | | |
|---------------|--------------------|---|
| 1. Precedence | <div>CONFIRM</div> | Per-transaction auditor setting should override the team default. Mirrors the existing settings pattern in the thread (team settings set the default, per-deal overrides apply). Confirm direction on the call. |
| 2. Data key | | Reuse the existing settings keys added today. Shaily noted <code>cda_commission_plan_settings</code> keys were added — the CDA type likely belongs alongside those rather than a new store. |

IV. Open Before Build

- | | | |
|-----------------------------|--------------------|--|
| 1. Agent breakdown per type | <div>BLOCKED</div> | Shaily can't yet visualize the breakdown screen for all four types. She asked twice for designs showing the agent-facing calculation for each, and the team jumped on a call. The roll-up rules (II) need confirmed mockups before the breakdown logic can be built. |
|-----------------------------|--------------------|--|

2. Post-split line items

Agents can add/remove post-split deductions themselves. Shaily flagged that even in a hidden model, individual post-split fee line items may still need to show to support that workflow. Reconcile with the "hidden" types.

3. Who-pays default

For a fee hidden from the agent, "who pays" = Team or Agent (never Radius). Confirmed by Biju. Worth wiring as an explicit field on hidden fees so the roll-up target is unambiguous.
